

# EthTrust

February 2022

- Ethereum is the foundation of EthTrust, it's even in our name
- We have been active members of the Ethereum community since 2014
- We have won past hackathons, but our proudest moment was at ETHDenver 2020 when we did the first ETH transaction in space and won 2nd prize
- Honored to have come back with a startup this year
- Our four core engineers are here hacking together for the first time  
TY Team!  
TY ETHDenver!

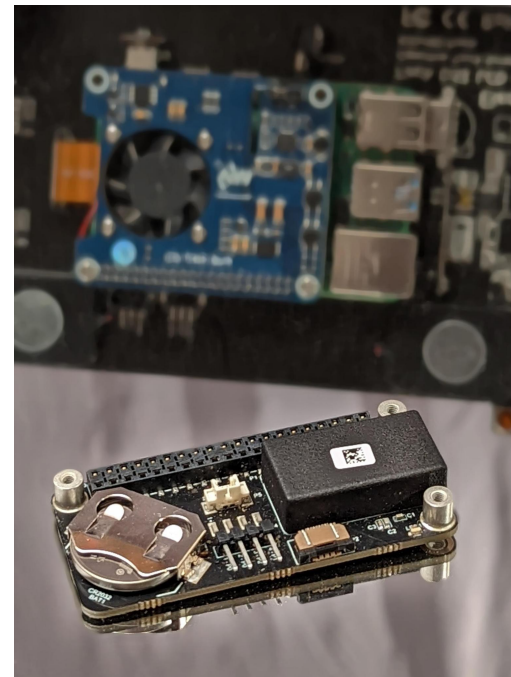

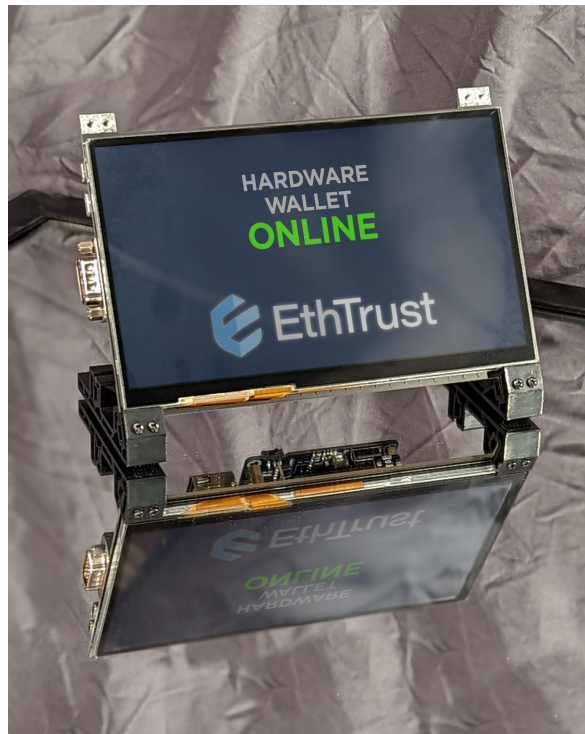

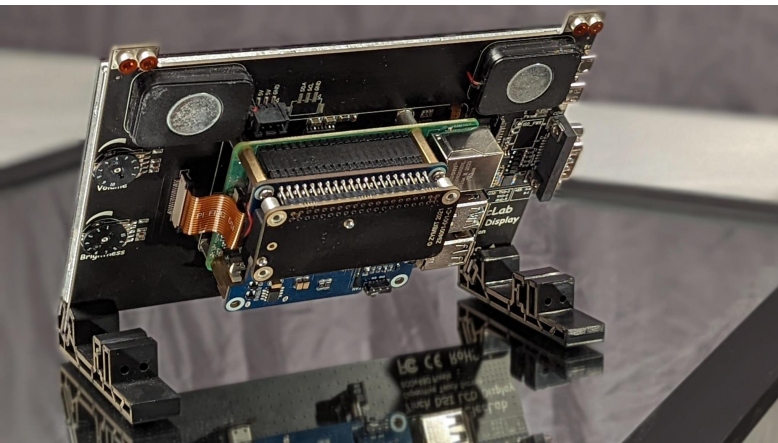

EthTrust brings safety, security, reliability and recovery to digital assets using remotely-controlled hardware wallets.

Leveraging multi-sig protocols and physically isolated hardware, access to your wallet is controlled at the touch of a button.

And it all takes place on-chain.

Gone be the days you wake up in a cold sweat under a dark sky wondering if your digital assets are secure. 😎

# Solution/Hackathon Entry

# Team

- Chris Hughes
- Ari Lerner
- Steven Schroeder
- Patrick Asher

# THANK YOU!
